

Kidney questionnaire

Have you seen a nephrologist? It is important that you do this before we begin, as my scope of practice is limited in Texas. I do not diagnose, address emergency cases, or work in a hospital or dialysis center. If there is a diagnosis, it would be helpful to know beforehand what it is.

Have you been given a diet protocol? If so, please list it here or send it along with this completed form.

What other treatment recommendations are you following in addition to medication and diet, such as fluid intake monitoring?

Have you had any imaging done? When? If so, please list the results, and bring them to the visit.

Have you had a kidney transplant? When? (If not, please skip the next question)

Have you had any acute rejections? How frequently? Are you experiencing chronic rejection?

Have you done a bone mineral density test? If so, when and what were the results?
